

Squareline

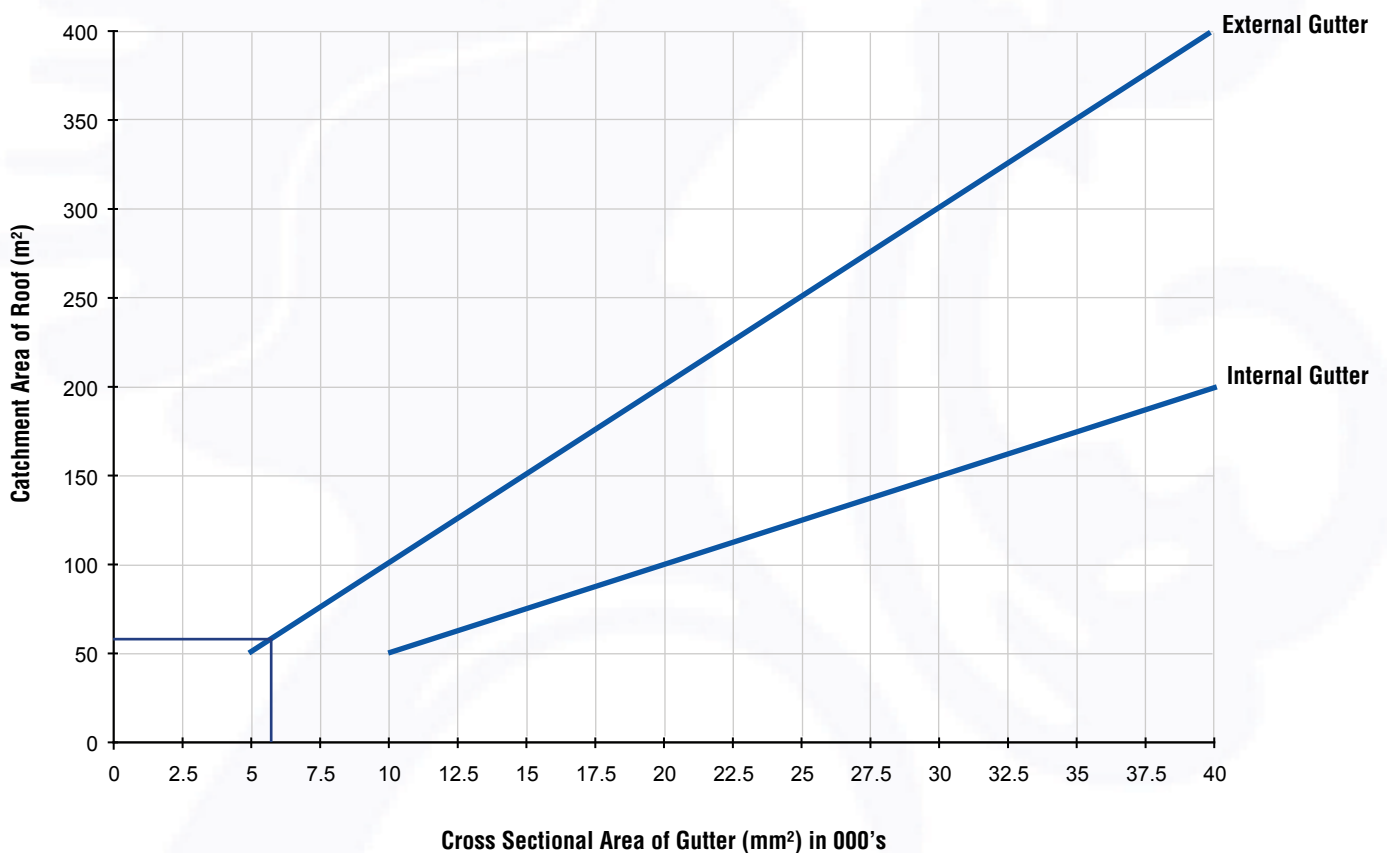

Squareline is a popular rainwater system solution with the clean, bold lines of traditional box gutter but with more modest dimensions, it has become popular for use in residential applications. Optional overflow slots prevent water spilling over the back of the gutter should blockage occur. Squareline looks great with profiled Longrun sheeting or Tile roofing. Squareline is available in Zinalume, Galvsteel, Colorsteel Endura and Colorsteel Maxx.

Cross-sectional Area: 6090mm²

all dimensions are nominal

Catchment Area of Roof v Cross Sectional Area of Gutter

Note: The graph is based on a rainfall intensity of 100mm / hour and roof pitches less than 10 degrees. For more information on roof catchment areas and the effect of gutter cross sectional areas download the document on Roof Drainage

Manufacturing Locations Christchurch

For other Metalcraft locations Squareline can be manufactured as a flashing
Squareline is available for purchase from all Metalcraft branch locations
